

I am contacting you with updated info regarding the offer for 2019-2020 of MSc courses in English in the Information Engineering field.

We have the new Master of Science degree (Laurea Magistrale) in Artificial Intelligence and Data Engineering for the academic year 2019/2020.

In the MSc in AIDE the medium of instruction is English for the mandatory courses (those in the first two tables in the file you received), and also for courses in the Computer Engineering Area (advanced subjects).

The other courses, namely:

- Computer Engineering Area (basic subjects)
- Information Engineering area
- Business Management area
- Business Law area
- Mathematics area

Are instead in Italian.

The total of the ECTS given in English exceeds the threshold of 96 (i.e. 120 minus those for the final thesis, which are 24), hence English-speaking students will be able to draw up a study plan entirely consisting of courses held in English. Moreover this is not a problem for Erasmus students that usually stay for a max. of 1 year.

The Embedded Computing Systems Degree course will not be available in 2019-2020.

The whole offer of our 3 Engineering Department will be published on UNIPi's website in June here:

<https://www.unipi.it/index.php/ects-catalogue>

We will send an update by e-mail by the end of April.

Kind Regards

Sara Andrenucci
